Nov. 7 Didn't get a very early start, a cold morning - (12°) Had to hunt the horses, Got started at 9, went a mile & crossed the divide at a very little above the spring.

I caught a *Thomomys* & an *Onychomys* & a *Hesperomys eremicus* & 2 *H. megalotus*

Nelson got a lot of *Hesperomys* of these 2 species & a *sonoricus*.

Tamias leucurus tracks are common all around on the snow.

Followed down the east slope going down rapidly for 5 or 6 miles over rough & rocky road, then along the base of red sandstone cliffs 1000 feet that have a strong resemblance to the Vermillion Cliffs of Southern Utah. The soil & plants along the base are also like those along the base of the Vermillion Cliffs. Cedar & Piñon trees come down to foot of cliffs, below the hills are rather bare. Came about 13 miles & camped at the Cottonwoods, an old ranch where a large spring ~~boils~~ flows out of the rocks. Cottonwood trees & Mesquits & desert Willow & scrubby live oaks. The soil is good & vegetation better than usual. Alfalfa is abundant. Camped at 2:30, Made up skins & set traps. We are now where the slope & drainage are to the Colorado River. Several plants that we have not met before on this trip & that are common on the Colorado R. Valley occur here.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
