The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the following terms.

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. See this project and other collections in the Smithsonian Transcription Center.

111' - Drilled hard again

113 - "[[ditto for Drilled]] soft

120 - Sample - samples recovered are coarse fragments with sharp edges apparently from cemented layers. (120-130)

-

130' - Drilling stopped and bit lifted 2 ft off bottom & mud allowed to circulate. Sample taken after 5 minutes circulation (130-140)

140 - Sample (marked 140-150)

150' Sample (marked 150-160).

(Note. Method of marking sample bags - for those since my shift started at 110, 120, 130, 140, 150 seem incorrect it seems to me that a bag of material taken when bit was at 150 should not be marked at 150-160 but rather 140-150. Please check. I will continue this system however to the end of this shift.).

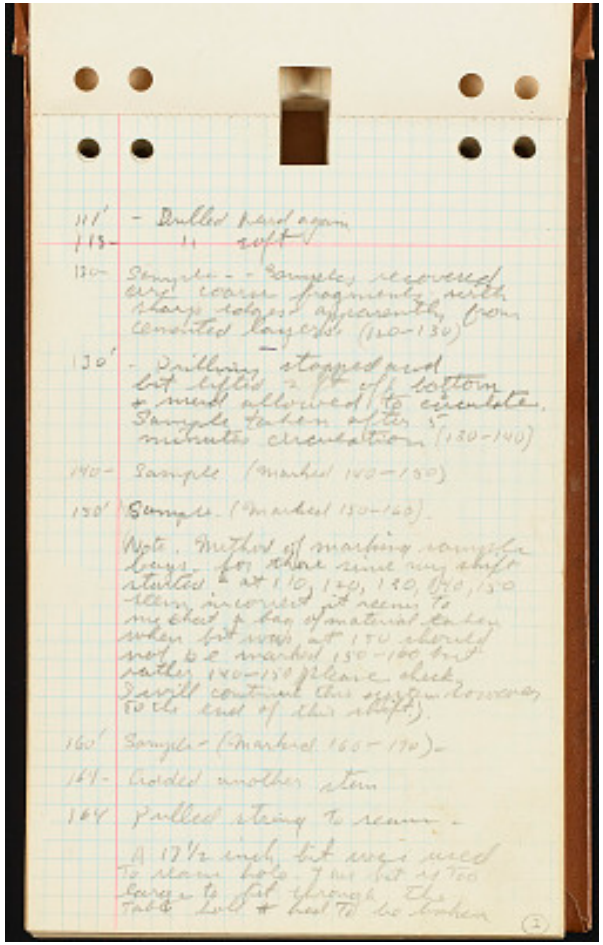

160' Sample - (marked 160-170)-

164- Added another stem

164' Pulled string to ream.

A 17 1/2 inch bit was used to ream hole. This bit is too large to fit through the table hole & had to be broken.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities.Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
