The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

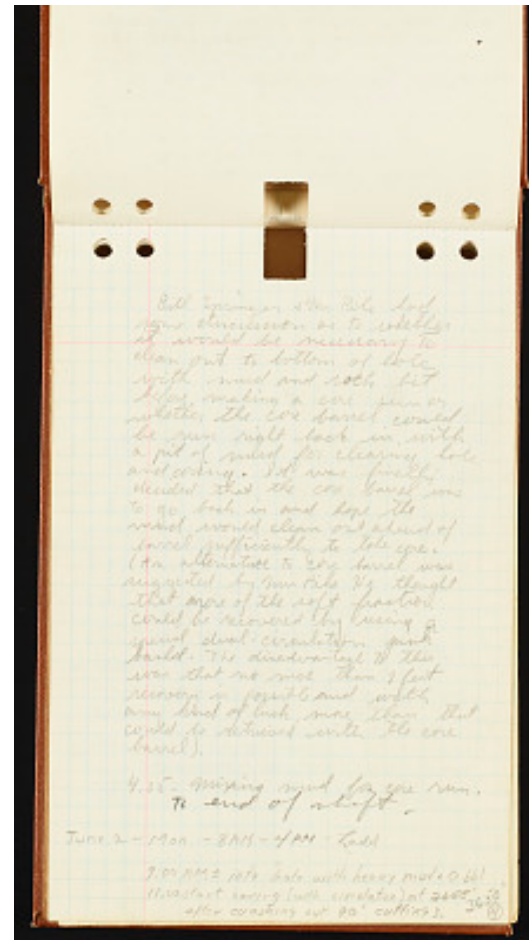

Bill Springer & Mr Pike had some discussion as to whether it would be necessary to clean out to bottom of hole with mud and rock bit before making a core run or whether the core barrel could be run right back in with a pit of mud for cleaning hole and coring. It was finally decided that the core barrel was to go back in and hope the mud would clean out ahead of barrel sufficiently to take core. (An alternative to core barrel was suggested by Mr Pike he thought that more of the soft fraction could be recovered by using a special dual-circulation junk basket. The disadvantage to this was that no more than 2 feet recovery is possible and with any kind of luck more than that could be retrieved with the core barrel).

4.35. Mixing mud for core run.
To end of shift.

June 2 - Mon. - 8AM - 4PM - Ladd

9:00 AM± into hole with heavy mud & bbl.
11:00 start coring (with circulation) at ~~3655'~~
~~3650'~~ after washing out 90' cuttings.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
