## Harry S. Ladd - Eniwetok, book 2, June 1 - June 10, 1952

Extracted on Apr-19-2024 03:12:36

The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the following terms.

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. See this project and other collections in the Smithsonian Transcription Center.

[[strikethrough]] Few larger forams (1st piece lower surface) [[/strikethrough]]

under 2) above were five pieces of a 3rd type of rock. The largest piece picked out is one inch across, the smallest about 1/3 inch. Many smaller smaller forams, mostly [[underlined]] quinqueloculine [[/underlined]], a few larger forams, in a matrix of dense greenish to [[strikethrough]]g[[/strikethrough]] dark gray rock. Minute crystals, cleavage [[strikethrough]]f[[/strikethrough]] planes. [[strikethrough]]S[[/strikethrough]] Minute granules of bright green (Glauconite??)

4) One oriented piece recovered from bit. Well cemented coral rubble, Mollusks, forams. Corals & moll. as molds.

[[line]]

7.35. AM - Back in hole with rock bit to ream 4500-4525 interval. To core 4525-4550 immediately thereafter.

[[underlined]] June 6 ~ Fri [[/underlined]] ~ 8 AM - 4 PM ~ Ladd

 $8{:}00\ \text{AM}$  - starting out of hole, having reamed to bottom of last core run - 4525

10:00 - into hole with [[drawing: diamond]] core bbl.

12:15 - partially plugged core bbl. - pull up 3 stands and circulate

12:45 - start out of hole to free bit.

2:45 - out of hole

[[circled]]19[[/circled]]

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities.Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
