[[underlined]]Additional notes on core #15[[/underlined]]
4528-4553'

Only [[strikethrough]]one[[/strikethrough]] two of pieces oriented - total length in box = 2'1"

Top piece a 2" rounded fragment of dolomitic ls. with numerous forams - both large and small in a matrix of detritus, some pieces of which appear well rounded. This piece is porous but not cavernous. Note one section (a foram?) stained gray + green. Smaller forams re xlized but sections of larger type appear well preserved. A real [[underlined]]foram dol. ls.[[/underlined]] See also dark plate.

Pieces below are coralliferous and distinctly more cavernous; algal? rods abundant, forams comparatively rare. Traces of dark stain; molds of moll. abundant (both internal + ext. - gast. + pelocy - some can prob. be ident.; ^[[limpets, Pecten, Arca, etc.]] och. spines, crab claw (marked - oriented piece) Scaphopod cast in one smaller pieces; gray + green staining on smaller pieces

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities.Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
