The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian National Air and Space Museum Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian National Air and Space Museum Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian National Air and Space Museum Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian National Air and Space Museum Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

duly acknowledged by the Signal Corps. The contract was awarded to the Wright brothers. Cato continued his intensive study of aeronautics and soloed on October 15th, 1909. In rapid succession he constructed and flew three Curtiss-type biplanes, one Bleriot-type monoplane. ~~[[Illegible]]~~ did considerable revising of engines ~~[[crossed-out]]~~ so they would run, as well as ~~[[crossed-out]]~~ and even converted some automobile engines for use in his airplanes. Most of his plane building and experimenting was done as a spare time activity, devoting his evenings and weekends to this work while employed as a machinist and gasoline engine repairman.

During this period Cato became acquainted with H.W. Blakley who already knew how to fly. He assisted Cato with his work and improved his flying ability. At times Cato did airframe and engine work for other local private plane builders to earn money for his own program. During 1912 and 1913 Cato and Blakley flew some exhibition engagements together at nearby places.

Blakley later left California to join Capt. Thomas S. Baldwin's team of exhibition aviators, then in 1915, he went with the Sloane Aeroplane Company of Bound Brook, New Jersey. There, Blakley saw an opening for Cato and wired him an offer to join them in the experimental development work. Cato accepted in November, 1915, remaining until April, 1916, when both he and Blakley left to join the L.W.F. (Lowe, Willard and Fowler) Engineering Company at College Point, Long Island, New York. There Cato became Experimental Aeronautical Engineer and assistant to the General Manager. With his assistance, the L.W.F. planes attained considerable renown, including such features as a full monocoque, molded plywood fuselage. This form of construction led to an association of the initials L.W.F., with Laminated Wood Fuselage. Other unusual features were armor protection for vital areas and the pilot, and control surfaces that were so balanced that the pilot's physical efforts were reduced. The earlier L.W.F. airplanes were powered by a 135 h.p. V-8 Thomas engine. In a later airplane a Liberty-8 was installed. Further improvements resulted in the first installation of a Liberty-12 engine which was a principal national effort of World War-I. It was flight tested in January, 1918. These airplanes had exceptionally good performance.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
