Harold E. Morehouse Flying Pioneers Biographies Collection - Thompson, DeLloyd

Extracted on Mar-28-2024 06:20:00

The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian National Air and Space Museum Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian National Air and Space Museum Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian National Air and Space Museum Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian National Air and Space Museum Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

Arden Downs near his hometown of Washington, Pennsylvania.

Thompson then entered into the coal business and for a time operated a mine in western Pennsylvania, after which he joined a construction company. In 1937 he had the urge to fly again and supervised the design and construction of a two-seater high wing monoplane bearing his name, with the idea of entering into the manufacture of it, but the plane was not a success and the project was abandoned. He did his last flying in this plane at Meadowlands, Pennsylvania, during the summer of 1937.

In 1945 Thompson suffered a serious automobile accident from which he never fully recovered, and on January 28, 1949, died in his sleep at his home in Washington, Pennsylvania, at age 61. He was married and left one son. His burial was in Washington Cemetery. On July 13, 1949, the local townspeople and a group of Early Birds dedicated a plaque in his memory at the local airport, at which time it became known as "Thompson Field" and remains so today.

A true and hard working pioneer of the early flying days, the name of DeLloyd Thompson rightfully belongs in the annals of aviation's historical records. He was an extremely active early pilot who had a tremendous amount of flying time to his credit, with very few accidents, even though he began flying on the very first early airplanes. He loved to fly and was always well liked among the early pilots.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
