USNM Curators Annual Reports: Department of Insects, 1887-1888

Extracted on Mar-28-2024 06:23:18

The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

Information as to the preservation of certain insects was given Mr. J.H. Werum, 48 Summit St., Toledo, Ohio; a reply to a letter from T.D.A. Cockerell in reference to some of the specimens sent by him, was prepared for the Division of Correspondence.

Prof. J.H. Comstock, Cornell Univ., Ithaca, N.Y. inquired for information concerning the classification of the Lepidoptera and along letter was sent in reply.

The square cases, containing an exhibit of insecticides and machinery, were transferred to the Department of Agriculture and replaced on the floor by Museum table cases, adding greatly to our storage room. 6 unit boxes were prepared and placed on exhibition during the month, occupying a large portion of time in preparation. Among the specimens exhibited are a series of Orthoptera, some large Arachnidae, a box of Myriapoda, and a box of samples of insect work. The classificatory series of the Hemiptera Homoptera was completed by the additions of specimens and drawings.

Case headings were also placed on some of the exhibit cases, and others are in course of preparation.

The arrangement of the Dipterous family Bombylidae was completed, and 24 single [^]were used for that purpose. There are nearly four boxes of duplicate material in addition. This is probably as complete a material in this family as is in any collection, and efforts will be made to have it monographically studied.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
