The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

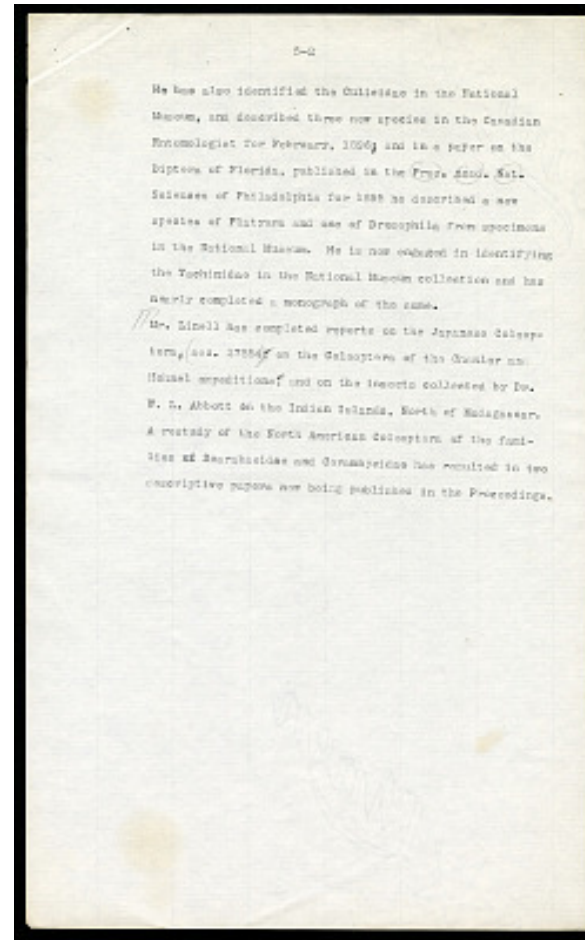

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

5-2

He has also identified the Culicidae in the National Museum, and described three new species in the Canadian Entomologist for February, 1896, and in a paper on the Diptera of Florida, published in the Proc. Acad. Nat. Sciences of Philadelphia for 1895 he described a new species of *Platyura* and one of *Drosophila* from specimens in the National Museum. He is now engaged in identifying the Tachinidae in the National Museum collection and has nearly completed a monograph of the same.

Mr. Linell has completed reports on the Japanese Coleoptera (acc. 27854), on the Coleoptera of the Chanler and Hohnel expeditions, and on the insects collected by Dr. W. L. Abbott on the Indian Islands, North of Madagascar. A restudy of the North American Coleoptera of the families of Scarabaeidae and Cerambycidae has resulted in two descriptive papers now being published in the Proceedings.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
