Adventures in Science: Interview with Thomas M. Rivers

Extracted on Mar-29-2023 12:36:50

The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.

The Smithsonian Institution (the "Smithsonian") provides the content on this website (transcription.si.edu), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or transcribe@si.edu

For more information on this project and related material, contact the Smithsonian Institution Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

WEBVTT

00:00:05.000 --> 00:00:15.000

[SILENCE]

00:00:15.000 --> 00:00:24.000

<i>Watson Davis</i>: Our Adventures in Science guest today is Dr. Thomas M. Rivers, Medical Director of the National Foundation for Infantile Paralysis.

00:00:24.000 --> 00:00:44.000

<i>Watson Davis</i>: Dr. Rivers has been, up until 1955, director of the Rockefeller Institute Hospital, and I think you could call Dr. Rivers, Dr. Virus, because perhaps, as no-one else in the world, he has been at the forefront of this great investigation that's been underway against the virus diseases.

00:00:44.000 --> 00:01:02.000

<i>Watson Davis</i>: Not only Polio, but all viruses diseases. Dr. Rivers, we've made a real progress, great deal of progress in the past years, few years, against Polio. Won't you tell us just what that amounts to, in your opinion?

00:01:02.000 --> 00:01:13.000

<i>Thomas M. Rivers</i>: We certainly have made a great deal of progress. When we started in 1938, none of us had any idea that we would be as far ahead of the game as we are today.

00:01:13.000 --> 00:01:27.000

<i>Thomas M. Rivers</i>: I think it's remarkable that so much knowledge has been found and so much has been done to prevent the disease, and also to treat those who have been crippled by the disease.

00:01:27.000 --> 00:01:41.000

<i>Watson Davis</i>: Well Dr. Rivers, there's really not too much excuse for a person getting Polio these days, with the vaccine that's available, this vaccine is one of the great achievements of modern medicine.

00:01:41.000 --> 00:01:47.000

<i>Watson Davis</i>: Are most of the people in the country protected against Polio today? I should think they would be.

00:01:47.000 --> 00:01:56.000

<i>Thomas M. Rivers</i>: A lot of people are protected, but there's an amazing number who are not protected, and I'd like to give you a few figures.

00:01:56.000 --> 00:01:58.000

<i>Watson Davis</i>: I wish you would, Dr. Rivers.

00:01:58.000 --> 00:02:09.808

<i>Thomas M. Rivers</i>: There are 109 million people under 40 years of age. 64 million of these have had at least one shot of Polio Vaccine.

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
