**The Smithsonian Institution thanks all digital volunteers that transcribed and reviewed this material. Your work enriches Smithsonian collections, making them available to anyone with an interest in using them.**

The Smithsonian Institution (the "Smithsonian") provides the content on this website ([transcription.si.edu](https://transcription.si.edu)), other Smithsonian websites, and third-party sites on which it maintains a presence ("SI Websites") in support of its mission for the "increase and diffusion of knowledge." The Smithsonian invites visitors to use its online content for personal, educational and other non-commercial purposes. By using this website, you accept and agree to abide by the [following terms](#).

- If sharing the material in personal and educational contexts, please cite the Smithsonian Institution Archives as source of the content and the project title as provided at the top of the document. Include the accession number or collection name; when possible, link to the Smithsonian Institution Archives website.
- If you wish to use this material in a for-profit publication, exhibition, or online project, please contact Smithsonian Institution Archives or [transcribe@si.edu](mailto:transcribe@si.edu)

For more information on this project and related material, contact the Smithsonian Institution Archives. [See this project](#) and other collections in the Smithsonian Transcription Center.

-2-

Also enclosed with this letter are several of our publications that deal with the Allende meteorite. The samples listed above are being sent to you under separate cover for your consideration as an exchange for approximately 500 g of Dhajala meteorite. When the shipment is received, please date, sign and return the white copy of the invoice to the Office of the Registrar.

If you are still interested in exchanging for the Vigarano or Felix meteorites, we could probably suggest Indian meteorites that we would like to have. The main mass of the Bali meteorite is in Vienna, and you might be able to arrange an exchange through Dr. Gero Kurat at the Natural History Museum. Our specimen of Bali is too small to use in exchanges. Our Al Rais specimen is also very small, and we would be reluctant to use it as exchange material.

Thank you very much for your consideration of this matter.

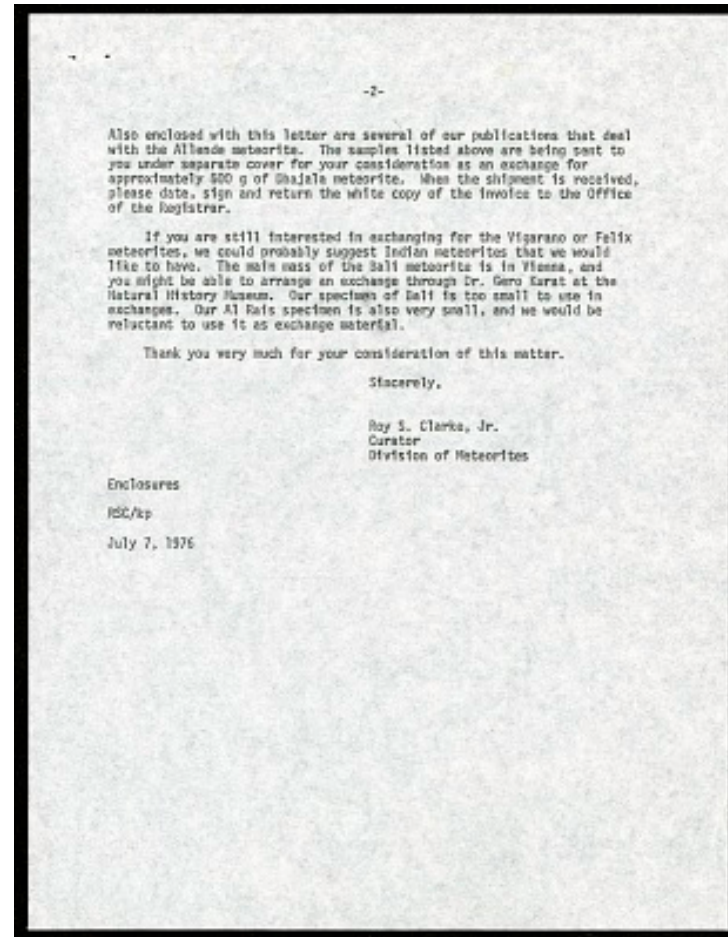

Sincerely,

Roy S. Clarke, Jr.  
Curator  
Division of Meteorites

## Smithsonian Institution

*Smithsonian Institution Archives*

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
