Professor S. Mukherji
Qr. No. 7/4, D-Type Flat
Unit IX
Bhubaneswar-7
Orissa, India

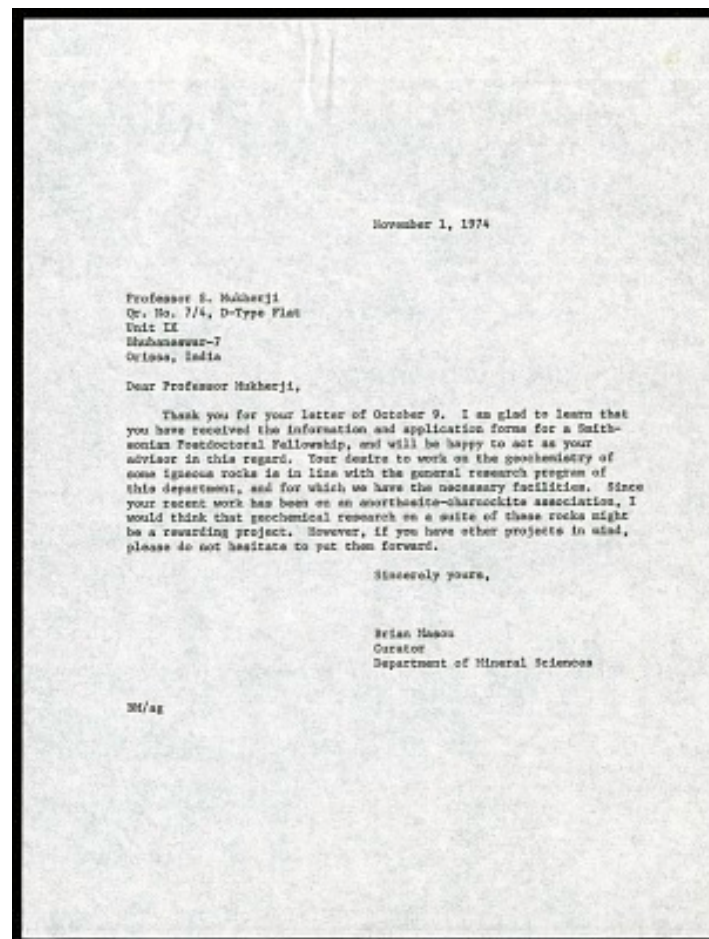

Dear Professor Mukherji,

Thank you for your letter of October 9. I am glad to learn that you have received the information and application forms for a Smithsonian Postdoctoral Fellowship, and will be happy to act as your advisor in this regard. Your desire to work on the geochemistry of some igneous rocks is in line with the general research program of this department, and for which we have the necessary facilities. Since your recent work has been on an anorthosite-charnockite association, I would think that geochemical research on a suite of these rocks might be a rewarding project. However, if you have other projects in mind, please do not hesitate to put them forward.

Sincerely yours,

Brian Mason
Curator
Department of Mineral Sciences

The mission of the Smithsonian is the increase and diffusion of knowledge - shaping the future by preserving our heritage, discovering new knowledge, and sharing our resources with the world. Founded in 1846, the Smithsonian is the world's largest museum and research complex, consisting of 19 museums and galleries, the National Zoological Park, and nine research facilities. Become an active part of our mission through the Transcription Center. Together, we are discovering secrets hidden deep inside our collections that illuminate our history and our world.
